Projects

Parkinson's disease Prediction using Spiral Images in Deep Learning

A development of web application for early prediction of the disease by classifying the spiral images of healthy and diseased subjects in an efficient manner.

ZenClass Student DashBoard

The development of a web application for a student dashboard for ZenClass, an online learning platform, would indeed provide students with access to their sessions, tasks, grades, and other relevant information.It will be built using technologies such as React.js for the frontend, Node.js for the backend, and MongoDB for the database. Additionally, the application will utilize Axios for making API requests and JWT for user authentication.
